

In the Claims:

Please amend claim 5 and add new claims 28-32 as follows:

1. (Original) A reflection-type liquid crystal display device comprising:

a light guide plate having a polarizing element stuck or adhered thereto on the side facing a reflection-type liquid crystal display panel and arranged maintaining a predetermined gap relative to the reflection-type liquid crystal display panel;

a source of light arranged on an end surface side of the light guide plate;

a light-diffusing function imparted to the surface of the reflection-type liquid crystal display panel on the side facing the light guide plate.

2. (Original) A reflection-type liquid crystal display device according to claim 1, wherein the reflection-type liquid crystal display panel has a rough surface on the side facing the light guide plate.

3. (Original) A reflection-type liquid crystal display device according to claim 1, wherein a film having a light-diffusing function is stuck to the surface of the reflection-type liquid crystal display panel on the side facing the light guide plate.

4. (Original) A reflection-type liquid crystal display device according to claim 3, wherein the film having the light-diffusing function comprises a sticking layer containing a light-diffusing material and a triacetyl cellulose film.

5. (Currently Amended) A reflection-type liquid crystal display device according to claim 3, wherein the film having the light-diffusing function is subjected to ~~the~~ reflection-preventing treatment on the side of the interface to the air layer.

6-27. (Cancelled)

28. (New) A reflection-type liquid crystal display device comprising:

a light guide plate having a polarizing element stuck or adhered thereto on the side facing a reflection-type liquid crystal display panel, the polarizing element maintaining a predetermined air gap relative to the reflection-type liquid crystal display panel;

a source of light arranged on an end surface side of the light guide plate;
and

a light-diffusing function imparted to the surface of the reflection-type liquid crystal display panel on the side facing the light guide plate.

29. (New) A reflection-type liquid crystal display device according to claim 28, wherein the reflection-type liquid crystal display panel has a rough surface on the side facing the light guide plate.

30. (New) A reflection-type liquid crystal display device according to claim 28, wherein a film having a light-diffusing function is stuck to the surface of the reflection-type liquid crystal display panel on the side facing the light guide plate.

31. (New) A reflection-type liquid crystal display device according to claim 30, wherein the film having the light-diffusing function comprises a sticking layer containing a light-diffusing material and a triacetyl cellulose film.

32. (New) A reflection-type liquid crystal display device according to claim 30, wherein the film having the light-diffusing function is subjected to a reflection-preventing treatment on the side of the interface to the air layer.
